SUMMARY

Full-Stack System Architect bridging the gap between product engineering, applied AI, and production-scale business operations. Specializing in fault-tolerant distributed systems (HLD/LLD), cloud-native DevSecOps pipelines, and multi-provider API architectures. Proven track record of shipping 0-to-1 products, leading cross-functional teams, and architecting high-performance applications that drive measurable business value.

SKILLS

- **Languages:** TypeScript, JavaScript, Python, C++
- **Architecture & Security:** System Design (HLD/LLD), Distributed Systems, DevSecOps, OWASP Top 10, API & K8s Security, OAuth2/JWT
- **Frontend:** Next.js, React.js, React Native, Tailwind CSS
- **Backend & Messaging:** Node.js, Express.js, REST APIs, Microservices, Apache Kafka, RabbitMQ
- **Databases & ORMs:** PostgreSQL, MongoDB, NeonDB, Redis, Prisma ORM
- **Cloud & Infrastructure:** AWS, Azure, Docker, Kubernetes, Terraform, Linux
- **CI/CD & Observability:** GitOps, Jenkins, CI/CD Pipelines, Prometheus, Grafana

EXPERIENCE

Founder

PrepPath **September 2026 - Present, Hyderabad, India**

- Architected a scalable technical education platform managing structured learning roadmaps for a global network of 5,000+ engineering students.
- Optimized content delivery utilizing Next.js Server-Side Rendering (SSR) and Redis caching, achieving sub-100ms page load times under peak traffic.
- Designed normalized relational architectures using PostgreSQL and Prisma ORM to efficiently process thousands of concurrent project submissions and evaluations.

Founder & Full-Stack System Architect

CodeLoom **February 2024 - Present, Hyderabad, India**

- Architected and shipped 10+ 0-to-1 full-stack applications using Next.js and Node.js, improving client development efficiency by 40%.
- Engineered 50+ secure REST API endpoints and event-driven microservices, scaling system throughput to handle high-concurrency workloads.
- Hardened DevSecOps pipelines using Docker and Kubernetes, reducing deployment times by 60% while maintaining 99.9% system reliability.

Project Mentor & Open Source Contributor

GirlScript Summer of Code (GSSoC) **July 2023 - January 2024, Remote**

- Shipped 30+ production-ready features and optimizations across 6+ open-source repositories spanning applied AI, cybersecurity, and e-commerce domains.
- Conducted rigorous pull-request code reviews for distributed teams, enforcing OWASP security standards and improving overall application stability.
- Streamlined Git version control workflows and Agile SDLC practices, accelerating feature integration across 5+ real-world application environments.

PROJECT

Empathy AI – Multimodal Mental Health Assistant

Team Project • github.com/Abhi-0930/empathy-ai.git • August 2025 - September 2026

- Engineered a multimodal AI platform processing text sentiment, PyDub audio, and continuous 2-second video frames for real-time emotion classification.
- Orchestrated LangChain workflows to deliver context-aware therapies, achieving 95% classification accuracy across multimodal data pipelines.
- Designed containerized deployments and observability pipelines, optimizing application response latency by 35% under concurrent load.

CodeLoom CRM | Enterprise Business Operations Engine

CodeLoom • github.com/Abhi-0930/codeloom-crm.git • February 2025 - April 2025

- Architected an enterprise-grade CRM using Next.js and PostgreSQL, securing 35+ REST APIs via strict JWT authentication and role-based access controls.
- Offloaded 25+ billing and notification workflows to asynchronous Redis background job queues, eliminating main-thread blocking and reducing API latency.
- Deployed microservices using Docker and Kubernetes, integrating Prometheus and Grafana dashboards for real-time telemetry and throughput monitoring.

INVOLVEMENT

Technical Trainer & Mentor

Across India • Freelancing • June 2023 - Present

- Trained and mentored 5,000+ students globally across 6 countries in advanced DSA, System Design, and MERN/Next.js Full-Stack Engineering.
- Delivered hands-on architectural bootcamps and workshops across 10+ engineering institutions, bridging academic theory with production standards.
- Collaborated with early-stage startups on 0-to-1 MVP prototyping and product architecture while securing wins in multiple technical hackathons.

EDUCATION

Bachelor of Technology

Minor in AI • Anurag University • Hyderabad, Telangana • 2026 • 7.55
